DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-31, drawn to transmission line sensing system and methods of operation, classified in class 702, subclass 150.
- II. Claim 32, drawn to process of making a transmission line sensor on the surface of a dielectric substrate, classified in class 216, subclass 13.

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product made could be constructed through a machining and assembly process, rather than on a dielectric substrate using a pattern.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
